### Space for 1 x Glucagen Hypokit

# HYPO BOX

Containing an average of 15 individual measured doses, based on the standard recommended guideline of 10g - 20g fast acting glucose to initially treat low blood sugar\*.

## Improving Quality of Care

The Hypo Box has been created to provide Primary and Secondary care settings with easy to use, accessible glucose products that can be easily identified and located in case of patient hypoglycaemia.

## Auditability & Training

Each Hypo Box is supplied with a treatment pathway and a patient record book for documentation and auditability of all hypoglycaemic episodes. Training is provided to staff of all levels, which can be incorporated into the development/training plans for staff of each individual organisation, for example:

- Hospital wards
- Nursing homes
- Schools
- Diabetes clinics
- GP surgeries
- Prisons and remand centres

## Potential cost savings for Primary Care Trusts

Correct Hypo Box usage translates to an average cost of £1.33 per 'treatment', which may prevent severe hypoglycaemia and additional associated costs such as ambulance callouts or hospital bed-stays.

## Contact Us

Speak to your GlucoGel representative for further information regarding the Hypo Box, and to discuss how it can be incorporated into your quality of care plan.
